

ANNIE - smart solution for ERROR-FREE production

The 24 Vision system is a solution determined for complex visual quality assurance and is based on neural networks and artificial intelligence. In principle, **ANNIE thinks like a human and works with the precision of a machine.**

Currently, there is quality control made by human with accuracy between 60-80%. Reliability of our system in production is higher than 99%.

Where is the problem? In undiscovered errors.

- Detection of changes between configurations
- Real-time checks
- Adaptation to production cycle
- Unlimited product variants
- Unlimited areas
- Precise and current data in real-time
- Identification of production weaknesses
- Data for LEAN management
- Industry 4.0 standard

BENEFITS of the ANNIE in quality assurance solution

- | | |
|--|---|
|  Error-free production |  Detection of errors in production process |
|  Just in time and flawless supply |  Time savings |
|  Savings in maintenance and resources |  Improved production efficiency |

How to implement the ANNIE in production?

- Check problems in 6 weeks with RAPID prototyping
- Deploy PILOT solution in production for 3 months
- Make integration with your production system
- Transfer pilot to production without limits
- Enjoy easy and smart installation
- Use your data for any application
- Identify weaknesses in production
- Save all images and results
- Protect your production
- Be safe with us
