

# OPTIMIZE YOUR PRODUCTION PROCESS

## Solution Overview

- **Digital Maintenance Assistant** combining **domain knowledge of an engineer** and unlimited processing capacity of **artificial intelligence**
- **Dashboard** showing machines health status and sending alerts in case of abnormal machine behavior, thus **solving the problem of unplanned machine failures**
- Enables engineers to monitor and maintain machines efficiently and **optimize the production process**

Our solution is scalable, provides reliable results and identifies the cause of machine failures

## Key benefits of the digital maintenance assistant

Unattended, fully **automatic monitoring** of your machines

Early detection of abnormal machine behavior and **failure prediction**

Faster **identification of the cause** of machine failures

Insight into the **health status** of your machines and components

Timely maintenance that **reduces your machine downtime by 20%**.

Optimized maintenance that **reduces your costs by 17%**
